EXPERIENCE

Merchants Fleet, Hooksett NH – Senior .NET Developer

MARCH 2022 - PRESENT

- Senior Dev / Tech Lead for a project team focused on delivering tools and systems to internal users and strategic clients.
- Design and implement REST APIs in ASP .NET Core
- Implement asynchronous, event-based microservices for vehicle ordering and lifecycle activities using a mix of Azure Functions (Serverless) and App Services
- Pushed toward using managed identities for all services, reducing exposure of shared credentials
- Develop IAC approach for cloud infrastructure deployments, greatly reducing manual steps and reducing deployment time by more than 90% (Bicep/ARM/PowerShell)
- Re-design enterprise DNS implementation to properly resolve private cloud services/endpoints/etc and leverage automatic DNS zone creation provided by Azure
- Lead effort to cause most cloud services to use private endpoints. PE deployments were done with Bicep, no manual steps.
- Lead effort to bring DevOps and Infrastructure independence to the project team, greatly reducing dependency on external teams.
- Created proof of concept to use containerized agents for DevOps CI/CD pipeline actions. Containers are bound to the private network, allowing deployment to private resources without VMs constantly running
- Created various PowerShell tools for auth debugging, cloud infrastructure inventory activities, housekeeping.

Peruse Software, Manchester NH – .NET Developer / Operations Engineer

2012 - March 2022

- RESTful API design and implementation
- Implemented OAuth workflows using Auth0, allowing customers to bring their own IDP to a hosted multi-tenant system
- Desktop development using WPF (and later, MAUI)
- Azure & Azure DevOps administration
- Redis for session caching, DB response caching, distributed locking, and message queuing strategy
- Load balancing and TLS termination using HAProxy for multiple

Skills | Languages Frameworks

C# / .NET Core

DNS

Routing (Inter and intra AS)

Ethernet Switching

Cisco, Juniper, Extreme Networks

Optical Networking

English.

Linux machines running Apache/mod_mono

- Migrated live production system from physical co-located servers to Microsoft Azure with zero customer downtime

Spectra Access, Manchester NH – Network Engineer / Operations

2008-2010

- Wireless ISP. WiMax, microwave, and carrier Wifi
- Routing using Quagga (Superseded by FRRouting)
- Lead and implemented paid and settlement free peering with other AS, including route design and 100+ mile backhaul over a leased wavelength
- Misc Debian Linux Web/DNS/Email server administration

G4 Communications, Manchester NH – Network Engineer / Operations

2007-2008, 2010-2012

- Graduated to Network Ops and Engineering from tech support. (Worked here twice before & after Spectra Access)
- Played a large role in region-wide carrier Ethernet rollout to 100+ central offices using Extreme Networks and Juniper (MX Series) hardware
- Helped design and implement passive CWDM and DWDM systems
- SONET design and implementation, interacting with gear via TL1
- Extensive data center experience in all aspects (Power, Cooling, wiring, racking, networking). Including moving the entire company, colocated customers, etc. to a new data center
- Taqua voice switch (T7000) configuration and rollout.
 - Traveled to multiple remote exchanges to establish local call completion presence. Intent was for our company to provide long distance calls using IP backhaul, creating a new revenue stream.
 - Configured T7K as a multimedia gateway between VoIP and legacy PSTN subscribers.
- Extensive FreeBSD use
- Misc Apache/BIND9/Sendmail/OpenSSH administration
